

## Memorial In Northland

Directed To Honor Men Who Lost  
Lives In War

A few hundred yards west of the station of Cranberry Portage stands a monument with the simple inscription on a bronze plaque: "To the Sons of Marth."

Located at the junction of the railway lines to Cold Lake and to Ft. McMurray, the monument stands on the northern shore of the Peace River. On a beautiful fall day in 1929, Harry McLean, president of the Dominion Construction Company, standing within a few feet of the cold waters of Lake Athabasca gave orders to a representative of his company.

"Will you see that a monument is placed between the tracks just west of the junction. Be it 10 feet tall to last forever. Have a simple plaque put on the southern face with the inscription 'To the Sons of Marth' and so be it." There was the suggestion of a catch in the throat of the big Glenora (Ontario) Scot.

He hesitated for a moment and glanced across the lake to where an aeroplane was taking off with a party of four passengers for Cold Lake, and then turned to the company representative at Cranberry Portage with the added instructions, typical of the man who gave them: "Build it well. I don't care what it costs. When it is finished send the bill to me."

The monument that stands on the pre-carboniferous rock of the north country was erected in memory of those who lost their lives in building the railways to Ft. McMurray and Ft. Smith. It stands in the gentle rains of summer, the scorching heat of the sun, the biting winds of winter, a memorial to "The Sons of Marth."

With titles of peace and spruce thrusting their charred fingers skyward, by lines of steel running three ways from the junction, the monument rises in the quiet of the Canadian north, "To the Sons of Marth" who told that the railway might be built.

## The Fruit Season

Authentic Advice On Best Methods  
Of Canning Fruits and  
Vegetables

With the season of fresh fruits and vegetables at hand the housewife is particularly interested in canning and preserving. There are many ways in which these may be undertaken, but only the right way gives success. Methods which have been thoroughly tried and proven by the Fruit Branch of the Dominion Department of Agriculture are fully outlined in pamphlet No. 105, "Canning Fruits and Vegetables." This little booklet, prepared by an expert, gives complete detailed instructions as to how to proceed, together with useful time-tables for the cooking of fruits and vegetables for canning. It also deals with types of kitchen equipment particularly suited for the purpose, and also how to get the best results with equipment readily available in the average home.

## More Butter Stored

An increase in the number of pounds of butter in cold storage in Canada on July 1, over the figure for the previous year is noticeable in a report issued by the Dominion Bureau of Statistics. Number of pounds of butter in storage, on July 1, was 21,861,200, compared to 11,237,600 on July 1, 1929, and 12,672,900 representing the average for the past five-year period.

For the first time in history the Bank of England recently agreed to finance an installment business.

Snakes kill about 20,000 persons annually in India.

"It's funny, whenever I get home late, all my house calls the next day. What should I do about it?"  
"I should get a divorce."—Hummer, Hamburg.

W. M. U. 1937

## Information For Bee Keepers

If Colonies Are Kept Busy They Are  
Less Likely To Swarm

If bees are kept working hard they are less likely to swarm than if they have nothing to do. Many things can be done to divert the activities of the bees to storing honey instead of swarming, but it is impossible to prevent swarming altogether in all colonies except by certain drastic manipulations. By keeping the bees comfortable and supplying them with an abundance of room as fast as needed, it is often possible to coax them through without swarming. As soon as the honey flow begins, or even before if the colonies are quite strong and the weather warm, the entrance should be opened to the full size, making them 1/2 inch deep by the full width of the hive. Some go even further by tilting the hive forward on the bottom board to give ventilation at the rear. This applies to strong colonies only, and during the honey flow. Otherwise there would be damage of robbing with such large openings. It is well, also, to place a wide board on the hive, projecting on the sunny side in order to prevent the sun shining directly on the surface. The shade should have cleats on the lower side so that there is a space between the cover and the board. By closing the cover together, a good shade board can be made that will be quite useful in keeping the bees at work during warm weather.

## Extensions To Grain Elevators

In order to provide additional storage capacity for wheat and other grains grown in Southern Alberta, the Canadian Government will build a 1,000,000 bushel elevator at Lettbridge this year. This elevator is to cost about \$900,000. Extensions are also being built this year to the government storage elevators at Saskatoon and Moose Jaw, Saskatchewan, at a cost of \$400,000 each.

## Made An Indian Chief

H. C. Little, governor of British Columbia, was made an Indian chief by Hlaxlaxlax Indians at an interesting ceremony held in the Indian reserve near Calgary. His name is to be Chief Hlaxlaxlax.

## Canadian Grown Tobacco

Home Grown Article Cheaper Article  
Than Imported Variety

Canadian farmers are producing practically all the tobacco manufactured in this country. Dr. E. B. Archibald, director of the Central Experimental farm, told 150 experimental judges at Ottawa, attending a two-day course in studying live stock and field crops. Dr. Archibald claimed that the Canadian grown tobacco was a choice quality than the imported variety. He gave to the Dominion Department of Agriculture much of the credit for increasing the acreage, saying that research work had been largely instrumental.

He deprecated the attitude of some legislators and farmers that those engaged in scientific research were merely "soil farmers." Scientific work is absolutely necessary," Dr. Archibald affirmed.

In this view he was confirmed by J. Locke Wilson, superintendent of Ontario farms for the provincial department of agriculture. "There never was a greater need for co-operation between the scientist and the farmer than today," he declared, adding that farming today was the most scientific business and "it takes more brains to be a farmer than a high court judge."

L. E. McLean, Dominion cerealist, who referred to Howard wheat as now being considered the best type for growing in Canada, referred also to efforts being made to grow peas with different grains to secure a combination which will permit the farmer to harvest the highly desirable protein qualities of the peas by use of a tender.

## Canada's Primary Industry

Agriculture is Canada's outstanding primary industry, having a production value of nearly \$2,000,000,000 annually. When considered in relation to the subsidiary industries dependent on it, Canada is referred to as the leader in Canadian enterprise. As an industry it provides gainful occupation for nearly one-third of the population, more than fifty per cent. of Canada's population.

## Eradication Of Weeds

Get The Weeds Killed Before They  
Have Time To Go To Seed

This is the period of the year when the farmer's greatest perennial problem, weeds, becomes acutely apparent. Now, too, is the time to get effective work for their eradication. There is only one thing to do with weeds—get rid of them; and cultivation is the best way by which this can be done. Get the weeds killed before they have a chance to go to seed—hoeing is good in some crops; after-harvest cultivation helps clean grain fields; and other methods are used. Two good reasons for the elimination of weeds are given by experts of the Dominion Department of Agriculture:—(1) weeds take up a large percentage of the moisture needed by growing crops; and (2) they use up much of the plant roots so necessary to growing crops.

## Survey Of Clay Resources

Summer Survey To Be Made In  
Southern Part Of Saskatchewan  
Professor H. G. Worcester, head of the Department of Ceramics, University of Saskatchewan, has commenced his summer survey of clay resources of the southern part of the province, under auspices of the Provincial Department of Railways, Labor and Industries. He will proceed first to Claybank where a new pit is being opened containing three types of clay thought suitable for brick and pottery ware. From Claybank, he will go to Kelowna and will investigate possibilities along the Sturge cut-off.

## Collar Garden Thrives

By means of ultra-violet ray lamps and a floor specially prepared with sand and fertilizer, flowers, berries and fruit are being rushed to maturity in the cellar of the home of Viscount Fitz Alan, near London. When the King and Queen visited it recently they were surprised to learn that daffodils were about to bloom in January and strawberries in March.

—Less than 15,000 of the 2,500,000 potential horse-power of Bolivia's materials have been developed.

## Building Bridges

Everyday Life Cannot Wait For  
Working Out Of Theories

Stonewall Jackson is said to have had in his army an old man who had long experience as a bridge builder, but whose education was in the school of hard work. On one occasion it became necessary to replace a bridge which the Yankees had destroyed, and there was no time to lose. The general called the old man into his tent and explained the situation.

"We must have that bridge at the earliest possible moment," he said. "Get a plan from the chief engineer and set to work at once."

In the morning the general met the bridge-builder coming to report, and asked, "Did the engineer give you the plan?"

"O'ra!" replied the old chap, "the bridge is done. I don't know whether the piers is or not."

Life is a practical matter, and the building of its bridges will not wait for the working out of theories and dogmas. Few of us have our "p-ers" done when it comes to time to report to the General. The intuitive religious faith, the instinctive moral sense, which the average man possesses, enable him to build the bridges of everyday life.

Elaborate creeds and sophisticated philosophies have their place, as men try to think out the deeper meanings of experience, so in building great railway bridges across a mountain chain there must be the highly specialized knowledge of the technical engineer, where an error in the tenth decimal place may spell disaster. But in the simple relationships of the life of men, there is no need of dogma and faith. Said John Wesley, the great and simple man: "I am sick of opinions. My soul loathes the frothy foam. Give me a humble love of God and man, full of mercy and good will, equal to the love of the Father, and equal to the love of the neighbor, and I will be saved."—Minneapolis Journal.

## Contain Element Of Truth

Explanation Of Proverbs Which Con-  
tains Moon With Weather

There is an old proverb which says: "Control over the weather, the appearance of this luminary is affected in certain ways by the state of the air, and by the presence of clouds, and these, in turn, have certain relations to approaching weather changes. Hence some of the old proverbs and rules connecting the moon with the weather contain an element of truth."

There is, for example, a widespread belief that moonlight is favorable to the occurrence of frosts. Moonlight itself has nothing to do with the temperature of the air, but the moon can act as a reflector of the sun's rays, and a clear sky at night permits rapid loss of heat from the earth by radiation. The chilled earth cools the air, and it is hence the absence of clouds that permits the moon to be seen is likewise a condition conducive to frost.

The common halo or luminous ring surrounding the moon when seen at night is due to the presence of clouds of the same angular size—having a radius of about 22 degrees—but on an optical illusion it seems to be larger when they are high. The clouds forming halo stream out far in front of an advancing cyclone storm, with its attendant rain area, and in general these clouds are higher the farther they are from the storm centre. This explains the old saying: "The bigger the ring, the nearer the wet."

## As a Man Thinketh

People Naturally Lean Toward Things  
They Like Most

As you think, you travel, and as you love, you attract. You are today where your thoughts have brought you; and you will be tomorrow where your thoughts take you. You cannot escape the result of your thoughts, but you can endure and learn, and accept and be glad. You will realize the vision (not the idle wish), of your heart, be it base or beautiful, or a mixture of both, for you will always grasp that toward which you, secretly, most love. In your hands will be placed the exact results of your thoughts; you will receive that which you earn; so more, no less. Whatever your present environment may be, you will fall, or rise with your thoughts, your wisdom, your joy. You will become as small as your controlling desire; as great as your dominating aspiration.—James Allen.

## Manitoba Hydro Extensions

D. L. McLean, Hydro Commissioner for the Province of Manitoba, reports that 71 miles of the Portage-Brandon hydro transmission line has been constructed and that 250 men are now working on hydro construction work.

## Preparing Seed For Exhibition

Valuable Prizes May Be Won By  
Exhibiting Cereals

Interest in the exhibition of seed from cereal and field crops at the Dominion Department of Agriculture exhibition throughout Canada, is rapidly growing. There are no particular difficulties in participating in these exhibitions and with the exercise of a little care and good judgment in the preparation of the exhibits one may win valuable prizes. For the convenience of farmers, experts of the Dominion Department of Agriculture have prepared the following suggestions:

A good exhibitor will begin his plans before planting time. The exhibit, whether it be a sheaf or a sample of threshed grain, should represent as nearly as possible his ideal. The best material can be secured only from vigorous crops, free from disease and weeds. Because of its susceptibility to insect damage, seed can be recommended to all exhibitors.

The aim in showing sheaves is to display a few of the plants in the best advantage. Select only straight uniform plants which possess well-developed heads and panicles, and clean bright straw. These should preferably be cut close to the ground with a sickle and cured where they will be free from insect damage. Slight bending by exposure to the sun, while drying improves the appearance. Store sheaves by hanging the heads down to preserve the shape and compactness of the head.

Placing size and neat proportions set off the quality most effectively. The ideal sheaf has a well-rounded head obtained by allowing the stems in the centre to stand a little higher than those towards the margin. The sheaf should not be less than eight inches tall. All leaves should be stripped off before the stems become brittle and the sheaf should be neat-looking. Store sheaves by hanging the heads down to preserve the shape and compactness of the head.

The ideal sheaf has a well-rounded head obtained by allowing the stems in the centre to stand a little higher than those towards the margin. The sheaf should not be less than eight inches tall. All leaves should be stripped off before the stems become brittle and the sheaf should be neat-looking. Store sheaves by hanging the heads down to preserve the shape and compactness of the head.

## A Scattered Antique

Statue When Assembled Sold For  
Fifteen Thousand Dollars

Some little while ago Sir Cecil Harcourt-Smith, formerly of the Victoria and Albert Museum, in London, England, had a lucky find in his Sussex garden. When digging, the gardener came across a few bits of statue. Later they found the remainder scattered about the head. Still later, when the statue was assembled, it was found to be a head in an antique shop. Thinking it might be the head of the statue of Queen Victoria, he bought it for 10s. It turned out his surmise was correct. Still later on he sold the statue to the Melbourne Fine Art Gallery for £3,500.

## Moods Affect Health

The mood of the mind determines the mood of the physical organs, and thus influences the health of the body. Rabbi Morris Lichtenstein, founder of the Society of Jewish Science, told his congregation in New York: "If the mind is diseased, the body is diseased; the state of the body is beyond hope, then recovery will be greatly postponed or actually impossible," he said.

"I advise you to smoke at work. It soothes the nerves."

"Emphatically I am a diver."

Fat people are more likely to die from accidents than lighter weights, recent statistics indicate.

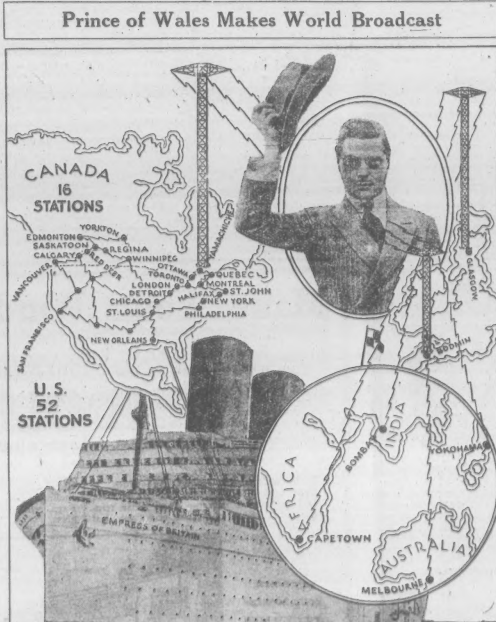

## How much does a ride to the hotel cost?

"One cent six."

"And with luggage?"

"I don't charge for luggage."

"Then please let my luggage and I go with you."—Lauder Koller, Zettling, Cologne.

Millions of listeners in all parts of the world heard the voice of H.R.H. the Prince of Wales, as he launched the new 42,000-ton Canadian Pacific liner "Empress of Britain" at Glasgow, Scotland, on Wednesday, June 11. It was essentially an Empire as well as a Canadian function, for Marshal bean-wireless took the royal address to Australia, South Africa and India in the same instant that it was wafted across the Atlantic from Berlin, England, to

Yamaguchi, Que., for distribution throughout Canada and the United States. Japan, too, got news of the new White Empress's launch by beam-wireless. In Canada and the United States, 46 stations distributed the broadcast. Picked up at Yarmouth by land wires, for transmission to Montreal, the Canadian distribution line landed through station CFCF, and fifteen other stations picked up from the radio transatlantic system of the Canadian Pacific Railway Company's Telegraph

in conjunction with the Trans-Canada Broadcasting Company. In the United States, a transcontinental string of stations passed the message on in a record book up, arranged out of courtesy to the Prince, with all commercial programs cancelled to make way for the news of the historic event. Others heard Lord Abernethy, chairman of John Brown and Company, builders of the mammoth vessel; and E. W. Beatty, chairman and president of the Canadian Pacific Railway.
